## Powerwall 3 + Backup Gateway

For full whole-home backup capability, this package includes a **Tesla Powerwall 3** (13.5 kWh battery) plus a **Backup Gateway unit**. The Backup Gateway enables automatic, instant power to your entire home during an outage. This comprehensive solution comes complete with all equipment and a professional installation.

- **Whole-Home Surge Protection:** Protects your entire electrical system from surges.
- **Instant Backup Power:** Automatically powers your home during grid outages.
- **13.5 kWh Usable Storage:** Stores ample energy for daily use or emergency backup.
- **Tesla Monitoring:** 24/7 performance monitoring via the Tesla mobile app.
- **Certified Installation:** Performed by our NAPIT & Tesla certified installers for quality and safety.

Price: *Supply & installation from £7,199. (Expandable with additional Powerwall units additions to this installation from £4,500 each)*

## Powerwall 3 (No Backup Gateway)

If you're looking for energy storage without whole-home backup, our standard package provides a single **Tesla Powerwall 3** installation with essential monitoring hardware. This is ideal for storing solar energy or off-peak power to use when you need it, helping reduce energy bills and providing limited backup for essential loads.

- **13.5 kWh Battery Storage:** Tesla Powerwall 3 battery for daily energy savings and backup of critical loads.
- **Tesla Remote Energy Meter:** Enables integration with your home's power system for accurate monitoring and control.
- **Tesla App Monitoring:** Track energy production and usage in real-time via the Tesla app.
- **Certified Installation:** Performed by our NAPIT & Tesla certified professionals, ensuring safe and compliant setup.

Price: *Supply & installation* **£6,199.**

*(Expandable with additional Powerwall units add-ons to this installation from £4,500 each)*

## Powerwall 3 Expansion Pack Options

Need more storage capacity? Tesla Powerwall 3 Expansion Packs let you add extra batteries (**13.5 kWh each**) to your system as your needs grow. You can add up to three additional Expansion units per system without requiring further DNO approval. We offer two installation methods for adding an extra storage, depending on your space and preferences:

### Stacked Installation

Your new Powerwall 3 is stacked behind existing unit, minimising floor space usage. Our technicians will safely reposition your current battery and mount the new one on the same wall bracket, following Tesla's guidelines for stacked installations.

- Adds an **additional 13.5 kWh** of storage capacity to your system
- Involves **removal and reinstallation** of the existing Powerwall to mount the new unit as a stacked pair (performed per Tesla's official guidance)

Price: *Supply & installation from £4,999*

### Side-by-Side Installation

The expansion Powerwall 3 is installed **side-by-side** with your existing unit, either wall-mounted adjacent to it or floor-mounted nearby (Within 4m). This option makes use of available wall space or floor space without moving the original battery.

- Adds an **additional 13.5 kWh** of storage capacity to your system
- **Flexible placement:** New unit can be wall-mounted or floor-mounted next to the existing battery (ideal for garages or utility rooms)
- **Included cabling:** Up to 4 meters of Tesla cabling harness is included to interconnect the batteries neatly and efficiently

Price: *Supply & installation from £4,849*

## Warranty and Installation Notes

- **Expandable System:** You can add up to 3 Powerwall 3 expansion units (13.5 kWh each) to a single system with no additional DNO approval needed
- **Comprehensive Warranty:** All installations come with a **2-year workmanship warranty** on our installation. The Tesla Powerwall 3 battery itself includes a **10-year manufacturer's warranty** for peace of mind
- **Certified & Compliant:** We handle all necessary DNO applications and provide **MCS certification** for your system, ensuring the installation meets all regulatory standards.
- **Installation Conditions:** Pricing assumes the installation is within ~10 meters of your main electricity meter and that you have a registered smart meter on site. (If additional wiring or equipment is required beyond this scope, we will discuss any extra costs in advance.)
